github.com/nemocionelo | itsnemo.dev

PROFESSIONAL SUMMARY

Full-Stack Developer with Computer Science degree and production experience building scalable web applications and data pipelines. Architected multi-vendor ETL platform processing 7+ data sources with async Python and robust normalization engine. Shipped production system with JavaScript frontend/backend serving 240+ operational hours with sub-0.5s load times. Proficient in RESTful API design, database architecture, web scraping, data engineering, session management, and performance optimization. Experienced in AI-assisted development workflows and modern development tools. Strong foundation in algorithms, data structures, and software engineering principles.

TECHNICAL SKILLS

- Languages: JavaScript (Production), Python (Production), HTML/CSS, SQL, Java, C, MATLAB, R
- Web Development: RESTful APIs, Session Management, Authentication, Caching, Responsive Design, Single-Page Applications
- Data Engineering: ETL Pipelines, Web Scraping (Playwright, BeautifulSoup), Async Programming, Data Normalization, Schema Design
- Database & Data: SQL Database Design, Data Modeling, Query Optimization, Data Pagination, Performance Tuning, JSON Processing
- Tools & Workflows: Git, GitHub Actions, CI/CD, Version Control, AI-Assisted Development, Agile, Technical Documentation, Code Review
- System Design: Architecture Design, API Design, Performance Optimization, Scalability, Security Best Practices, Fault Tolerance
- Additional: Adobe Creative Suite, Google Apps Script, Microsoft Office Suite, Cross-Platform Development

PROFESSIONAL EXPERIENCE

Full-Stack Developer / Data Engineer (Freelance)

Multiple Projects / Remote / May 2024 – Present

Race Data Intelligence Suite (PACE) – Multi-Vendor ETL & Analytics Platform -

Architected and deployed production-grade ETL platform processing race data from 7+ major timing vendors into unified analytics-ready schema - Engineered robust async Python pipeline using Playwright for dynamic content scraping, BeautifulSoup for HTML parsing, and requests for API integration - Designed canonical pace.v1 schema with

comprehensive normalization engine handling heterogeneous vendor formats, missing fields, and format shifts - Implemented fault-tolerant data ingestion detecting vendor types dynamically and adapting parse strategies per site architecture - Built CI/CD-ready system for GitHub Actions integration enabling automated data refresh and JSON publication without human intervention - Created interoperable JSON outputs consumable by Chart.js, modern frontends (Vite/Tailwind), and BI tools (Tableau, Looker, Google Data Studio) - Developed comprehensive error handling and diagnostic logging for production-grade reliability - Technologies: Python, Playwright, BeautifulSoup, requests, lxml, async/await, JSON schema design, GitHub Actions, CI/CD

Student Tutor Dashboard – Full-Stack Web Application - Architected and developed full-stack web application from requirements gathering through deployment, serving 240+ operational hours with production-grade reliability - Built RESTful API backend using JavaScript/Google Apps Script with 8+ endpoints for authentication, data retrieval, real-time updates; implemented role-based access control and session management with 60-minute TTL - Designed responsive frontend UI with vanilla JavaScript, HTML/CSS featuring modal systems, tabbed navigation, data tables with pagination, lazy loading, and real-time data synchronization without page refreshes - Engineered normalized multi-sheet relational schema handling 4000+ records across Students, TutorStudent, Comments, Student Info, Availabilities, and Lessons tables - Implemented advanced multi-layer caching strategies (90KB size optimization, 60% faster API responses, 40% fewer calls) and pagination achieving sub-0.5 second load times - Integrated multiple data sources with complex relational queries, data transformations, and append-only logs ensuring data consistency with zero conflicts - Developed nightly maintenance jobs for deduplication, link bootstrap, and automated data validation - Created comprehensive error handling, diagnostics, and safe cache sizing for production stability - Technologies: JavaScript (ES6+), HTML5, CSS3, RESTful APIs, SQL-style data modeling, Google Apps Script, Git, AI-Assisted Development

Tutor Availability Platform – Internal Tools & Platform Engineering - Built availability and scheduling platform augmenting existing SaaS (Teachworks) with enhanced operational visibility - Engineered calendar data parsing system integrating iCal feeds with spreadsheet-backed structured datastore - Developed SPA-style UI with filter/search controls, automated caching, and time-driven triggers for staff and leadership - Implemented cross-system data orchestration connecting calendar feeds, spreadsheets, and third-party APIs - Designed internal ops tool solving specific workflow pain points through rapid prototyping and iterative stakeholder feedback - Technologies: JavaScript, Google Apps Script, Calendar APIs, Spreadsheet-based relational modeling, Workflow automation

Computer Science Projects

University of New Mexico | Albuquerque, NM | 2019 – 2022

- **Forensics Database System:** Led team development of full-stack application for UNM Office of Medical Investigator - designed SQL database schema, implemented web application frontend, and built from technical specifications

- Client-Server Network: Programmed and implemented networked application with custom protocol, demonstrating understanding of socket programming and distributed systems
- BASIC Interpreter: Built functional programming language interpreter from scratch using Scheme/Haskell, demonstrating deep understanding of language design and compilers
- Large Software Systems: Designed and developed multiple large-scale software projects following software engineering best practices including requirements analysis, design patterns, testing, and documentation

Graduate Intern – Recreation and Sport Management

Coastal Carolina University | Conway, SC | Jan 2025 – May 2025

- Managed data workflows and content calendar systems for Division I athletics program using technical automation
- Collaborated with cross-functional teams using project management tools and technical communication

Student Social Media Associate

University of New Mexico, Communications and Marketing | Albuquerque, NM | Jul 2021 – Jul 2023

- Analyzed social media platform algorithms and engagement metrics to optimize content delivery and maximize reach
- Managed content management systems and workflow automation tools (Sprout Social, Notion) to streamline operations

Computer Science Peer Tutor

University of New Mexico | Albuquerque, NM | Sep 2021 – May 2022

- Taught computer science concepts including programming, data structures, algorithms, and software design to college students
- Developed technical communication skills by explaining complex concepts to diverse learning styles

EDUCATION

Bachelor of Science – Computer Science | GPA: 3.62 | cum laude

University of New Mexico | Albuquerque, NM | Aug 2019 – Dec 2022

- Honors: UNM Scholars, Mountain West Scholar-Athlete, Academic All-Conference, 2022 Inspiring Graduate
- Relevant Coursework: Software Engineering, Computer Networking, Operating Systems, Data Structures & Algorithms, Design of Large Programs, Database Systems

- Technical Projects: Forensics Database (SQL + Web App), Client-Server Network, BASIC Interpreter, Multiple Large-Scale Software Systems

Master of Science – Recreation and Sport Management

Coastal Carolina University / Conway, SC / Aug 2023 – May 2025 (expected)

- Relevant Coursework: Project Management, Data Analytics, Organizational Leadership

ADDITIONAL EXPERIENCE

Mathematics Tutor

Angwin Academy / Remote / Jun 2024 – Present

- Tutor SAT/ACT prep, math, science, and history, developing problem-solving approaches and analytical thinking skills

Content Creator

@itsnemo.mp4 / 2019 – Present

- Built organic following of 250K+ across platforms through data-driven content strategy and audience analysis

Division I Student-Athlete – Track & Cross Country

UNM & Coastal Carolina University / Various / 2018 – 2025

- Balanced rigorous academic curriculum (3.62 GPA in Computer Science), year-round athletic training, and professional work commitments
- Developed elite-level time management, goal-setting, and discipline applicable to fast-paced development environments
- Training toward 2028 U.S. Olympic Trials, demonstrating long-term focus and performance optimization mindset
